

Camilo Taborda

Software Developer

Profile

Software Developer specialized in front-end and interactive interfaces, with strong expertise in 3D configurators and immersive experiences using React, Three.js, and React Three Fiber, as well as augmented reality (AR) integration. Focused on building high-performance, accessible, and engaging digital solutions while continuously learning and innovating.

Education

Continuous Learning in Software Development - Platzi

Constant training in software development through specialized courses. I stay up to date with the latest technologies, trends and best practices in the industry to improve my skills and create innovative solutions.

Spoken Languages

English – B1 (Intermediate)

Spanish – Native

Professional Experience

77 Render Studio

Software Developer

2021 - 2023

I developed innovative software solutions for the real estate sector, creating platforms that reduced project management time by 25%, improved property visualization with 3D tools, and increased client engagement by 40%. My work contributed to operational efficiency and digital transformation.

Ardata Tech

Software Developer

2023 - present

I am responsible for the complete front-end development of the software, from interface design to final implementation. I transform products into interactive 3D models, enabling customization through configurators and visualization in augmented reality within the customer's home. My work covers every stage of the visual and interaction experience, ensuring smooth and intuitive navigation. In doing so, I drive the adoption of new technologies and significantly enhance the shopping experience, creating innovative and engaging digital environments.
